ABSTRACT

A method of delivering data to one or more data-handling devices, the
method comprising the steps of: storing data that is intended for
transmission to the data-handling device according to a predetermined
template which provides a plurality of fields each of said fields being
capable of containing a portion of the data; providing mappings that map
the data within the fields of the predetermined template to fields within
alternative templates should it be determined that the data-handling device
is not capable of handling data held in the predetermined template; and
transmitting the data to the data-handling device.

To be accompanied, when published, by Figure 3 of the drawings.
